YEALINK T53W & T54W
QUICK START GUIDE

To get the most out of your business phone, you'll need to connect it to the internet first.

Don't worry. It's easy and only takes a couple of minutes.

Follow these steps and you'll be up and running.

1. Press **Menu**

2. Select **Settings** and press **Enter**

3. Select **Basic Settings** and press **Enter**

4. Scroll to Wi-Fi and press **Enter**

5. Select **Wi-Fi** (toggle **On**) and press **Save**

6. Once your phone recognizes the Wi-Fi adapter, press the OK softkey to scan for available Wi-Fi networks.
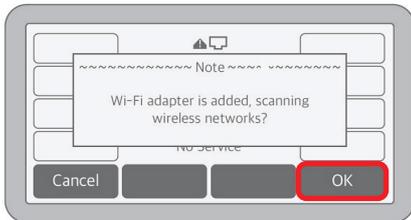

Your phone will list the available networks it has identified.
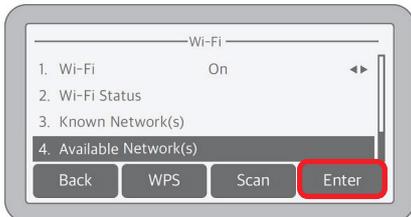

7. Press the **Enter** softkey to continue.

8. Use the up and down arrow buttons to scroll through the available networks and highlight the one which you'd like to use. Press the **Connect** softkey.
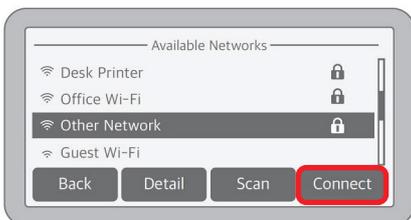

9. Enter the Wi-Fi network's password.
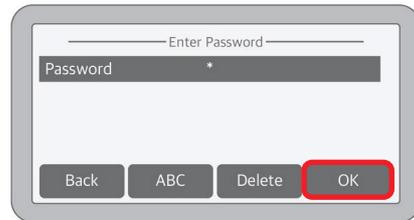

Using your phone's softkeys and its numeric keypad in a "multi-tap" approach allows you to toggle between uppercase and lowercase letters as you enter each character. For example, you can enter a lowercase "b" by pressing the ABC" (or "123") softkey until it displays "abc" and then pressing the 2 key twice. A lowercase "b" will appear in the Password field on your phone's display. If you make a mistake, simply press the Delete softkey to erase that character and try again.

Note: Special characters are under the star "*" button.

10. Once you have entered the password, press the **OK** softkey to connect to the network.

In the future, your phone will remember this connection as a Known Network. Once your phone is connected to the network and fully updated, the time, date and username will appear on the display.

Now you can make and receive calls.
