Broadband Speed Testing 101

Whether you use the internet for many aspects of managing your business, or you just use it on occasion, speed matters.

What is Good Broadband Speed?

When it comes down to it, good broadband internet speed is just a number. You may want to look at what services you use and how many users you have within your business, and what connection speed your needs require.

Conducting a Broadband Speed Check

1. Plug in directly to your modem or router
2. Make sure no other applications are running
3. Make sure you are the only device connected
4. Test your connection using a fiber broadband tool
